

## Refeer Engineering & Technologies Operations Manager.

### Job Description

---

Candidates must have Bachelor's degree in Process or Chemical Engineering (foreign educational equivalent is acceptable) and at least 3 years' of experience in each of the following: (i) managing an industrial or processing facility, with demonstrable administrative skills; (ii) refrigeration technologies; (iii) electrical generation technologies; (iv) developing and managing budgets; (v) managing self-controlled work teams; and (vi) managing and developing Internet Of Things (IOT) solutions. In addition, must have demonstrable knowledge of lean manufacturing techniques and implementation and demonstrable knowledge of Quality Control Management (QCM) techniques and implementation.

Successful candidate for this position is responsible for the design, implementation and control of different manufacturing processes, Quality Systems (QS) certification and development of Standard Operating Procedures (SOP) necessary to meet international requirements for refrigerated transport of food products for human consumption. This position also assists with the incorporation of new refrigeration technologies and control of operations cost indexes under international standards. Management responsibilities include: evaluate, implement and maintain the Quality Systems (QS) on the referer manufacturing process to satisfy certifications needed for the operation; research, evaluate and implement new referer technologies; develop Standard Operating Procedures (SOP) necessary to meet international requirements for refrigerated transport of food products for human consumption; hire, train and retain operations staff; implement and control manufacturing indexes to maintain hi-efficiency operations; maintain operations cost control; develop and control a maintenance program to keep reliable operations; develop other projects as assigned. Reporting responsibilities include: report new referer technologies on the market; review all operations and report on daily basis during the start-up meeting; keep the project timeline report updated and explain any discrepancies; maintain the payables and collectables reports; submit a monthly operations report; develop and control an operations budget and explain discrepancies.

This Refeer Engineering & Technologies Operations Manager position is located in Logan, Utah, which is situated in a spectacular Rocky Mountain valley approximately one and one-half hour drive north of Salt Lake City. Applications, along with a cover letter, curriculum vita, and a list of at least three references, should be submitted to Kyle Christensen at [kyle@transchill.com](mailto:kyle@transchill.com).

More information about this position may be obtained by contacting Kyle Christensen at [kyle@transchill.com](mailto:kyle@transchill.com) or (208) 339-2151.
